Lab 4E: This Model is Big Enough for All of Us! Response Sheet

Own your own

•	Write down which other variables in the movie data you think would help you make better
	predictions.

•	Are there any	variables t	that you thin	k would not	improve our	predictions?
---	---------------	-------------	---------------	-------------	-------------	--------------

• Create a model for all of the variables you think are relevant.

• Assess whether your model makes more accurate predictions for the testing data than the model that included only runtime and reviews_num.

• With your neighbors, determine which combination of variables leads to the best predictions for the testing data.
